

meet caitlin  
davidson  
who lives with  
kidney disease

Eleven-year-old Caitlin of Auckland was just three when she was diagnosed with the kidney disease nephrotic syndrome which developed from a strep throat infection. She had a kidney biopsy when she was four and is currently on immunosuppressants and from time to time takes steroids.

She lives with her parents Dezley and Tom, sister Amelia 5 and their pet dog Jerry and cat Jessi.

Caitlin's interests include art, reading, computer, drama and music, going to the movies and clothes shopping.
